Ostensibly based on an indication of allowable subject matter in claim 7, Applicant has amended the claims such that they are now all dependent from this claim.

The Examiner has reviewed the prosecution history to ascertain what were the reasons for holding claim 7 as allowable, but the record is silent. The only rationale that the Examiner could conceive of was that the reference did not expressly characterize the borosilicate glass component as being crystalline. However, a quick survey of the prior art confirmed the Examiner's suspicion that borosilicate glass is known in both crystalline- and amorphous forms. Given that (i) Yokota is not forthcoming as to what types of borosilicate glass are advocated, (ii) only three forms (crystalline, semi-crystalline, amorphous) are known, the Examiner should have taken the position that both a powder composition with crystalline- and amorphous borosilicate glass particles would have been obvious.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokota et al., JP 58-034870 for the reasons originally outlined in the January 30, 2006 response. To reiterate, both a composition have crystalline borosilicate particulate and a composition having amorphous borosilicate particulate would have been obvious to the skilled artisan familiar with the Yokota disclosure.

Of course, the Examiner would have to reconsider this rejection if they could demonstrate that it was unexpectedly superior properties in the composition containing the crystalline form of the borosilicate glass. Alternatively, Applicant mentions in their Specification different embodiments of the low melting crystalline particles that could be inserted into claim 7.
